

# ESCBOATS

Hello, Welcome aboard **EscBoats**. Inside you will find information regarding our Electric Powered Boats. Our website [www.EscBoats.com](http://www.EscBoats.com) is another good source for information as well.

We look forward to answering any questions and building a boat for you.

Thanks, Mike Novy

# ESCBOATS

Experience a relaxing and serene time out on the water in one of our electric deck boats. Their low maintenance easy plug and play ownership is just a click away.

**Aid your escape out on the water in the Esc'ADE.** Our flagship model is powered by Minn Kota's 112lb thrust motor that features a traditional steering wheel helm control and electric trim and tilt.

Features of the Esc'ADE deck boat

- Carpeted Deck
- Stainless Handrails
- Comfortable Furniture +2 Position Backrest
- Canopy/Bimini
- Radio that also allows plug in of personal music devices
- Helm Control with Steering Wheel and Throttle Control with Digital Readout
- Storage under the Helm Seat Pads
- On Board Chargers
- Courtesy Lights
- Coast Guard Approved Running, Anchor Lights and Bilge Pumps

# ESCBOATS

The Key to your escape may be the **Esc'KEY Electric Deck Boat**. Along with all the on board amenities of the Esc'ADE, the Esc'KEY has ambidextrous centralized helm control with tiller steering and manual motor storage. It is powered by one of Minn Kota's variable speed 112lb thrust motor.

The Esc'KEY is propelled by a Minn Kota 112lb thrust motor that propels this 36vdc model at 4.5mph. It is steered by a comfortable and easily reached tiller handle mounted between the 2 helm seat cushions allowing either left or right side control of the boat. Forward and reverse speeds are dialed in with the simple easy to reach dash mounted knob. The motor is raised or employed in the stern of the boat by lifting or lowering the D handle on the motor tube.

## **General Platform - Common Features (All EscBoats)**

The Electric deck boats we make are all based on the same  
**6' 2" x 13' 2" platform that seats up to 6 people.**

Optional Equipment/Accessories:

- Swim Ladders - Temporary or Telescoping
- Snack Table
- Canopy/Bimini Top
- Mooring Cover or Storage Cover
- Individual Component Covers
- Marine Batteries
- Anchor Winch – Bow and/or Stern Mount
- Custom Boat Trailer
- Custom Colors: Carpet, Bimini Top

### **About EscBoats**

We are located in Grand Rapids, MI and believe in building quality boats for you to enjoy on the water! Over here at EscBoats we enjoy outdoor activities and would live on the water if we could. Our familiarity with the boat comes from the many combined years as former employees of both Leisure Life Ltd.® and Johnson Outdoors Watercraft®. We are very proud and excited to be building this boat again and look forward to building one for you.

The **Esc'KEY** and **Esc'ADE** originally launched by Leisure Life Ltd.® as the ElDeBo® and then by Johnson Outdoors Watercraft® as the Escape Cruz Electric Deck Boat®. Those models have been enjoyed for many years by thousands of boat owners. EscBoat's unplug and play nature provides a fun, easy going, low maintenance pleasure craft that enhances your on-the-water enjoyment and adventure.

EscBoats has taken the best design elements from the ElDeBo® and Escape Cruz Electric Deck Boat® and added upgraded materials, components, and assembly techniques. Additionally, the Minn Kota® propulsion system has been upgraded and is now digitally controlled. All things considered we feel that the Esc'ADE is the most refined model to date and is easily the best electric deck boat in its class.

## **Propulsion Systems**

Our line of Electric Deck Boats offers 4 different propulsion systems.

The **Esc'ADE** uses a 36 volt, 3 battery system and has the benefit of electrically deployed and retrieved 112lb motor controlled from the helm console. It has a top speed of 4.6 mph. Top speed can be maintained as long as 5-6 hours between charging depending on cruising speed chosen, charge status and condition of the battery's along with other factors.

The **Esc'KEY** has a 36 volt 3 battery system and the 112lb thrust motor is simply manually deployed and retrieved from the stern of the boat with a top speed of 4.6 mph. Like all electrically powered boats there are many factors that influence run time. Its top speed can be maintained for 5-6 hours between charges depending on charge status and condition of the batteries along with other factors.

Other Factors that lessen run time can be anything that uses energy from the batteries. They can include; ambient heat, age of the batteries, charge status at the beginning of a ride, how much the accessories have been used, etc.

Note: run time at top speed specifications are listed for comparison only. Running any of these systems at less than top speed greatly increases total run time between charges.

Deploying and retrieving the motor on the **Esc'KEY** is very simple. By turning the motor handle at the stern a quarter turn to the left then lowering 10" is all that is needed to deploy. Reversing this process retrieves the motor. It is similar to lifting or lowering a 5 gallon bucket ½ full of water (20-25lbs) at 10", very simple. It is advised not leave these motors in the water while not in use for extended periods of time, storing out of the water will help realize the longest possible life span of the motor.

## **Upgrading, Refurbishing Services**

The Esc'KEY and Esc'ADE were originally launched by Leisure Life Ltd.® as the ElDeBo® and then by Johnson Outdoors Watercraft® as the Escape Cruz Electric Deck Boat®.

We take trade-ins, rebuilds, repair and sell older models also. Your used boat is completely rebuilt with the new tiller steering & propulsion and any additional options you desire.

Send us an email and we can help.
